

HYBRID® AV & NE

HYBRID® DISPOSABLE DUAL AIRWAY MASK – without exhalation ports

delivers optimal performance, maximizes fit and comfort

The Hybrid® AV & NE interfaces are disposable dual airway leak-free masks, designed for providing pressure support therapy or non-invasive ventilation. The unique design of the Hybrid® promotes patient comfort by eliminating pressure points on the forehead and across the bridge of the nose. A built-in chin flap gently supports the chin ensuring optimal performance.

The Hybrid® AV features an anti-asphyxiation valve that allows for access to room air if pressure decreases (i.e. power outage or circuit disconnect).

The Hybrid® NE incorporates all of the comfort and features of the Hybrid® AV, but eliminates the anti-asphyxiation valve, making it suitable for use with ventilators equipped with an active safety valve. Each Hybrid® package incorporates 3 sizes of pillows and a built-in mouth sizing gauge, eliminating the hassle of opening multiple packages to get the right fit.

ORDERING INFORMATION

Ref.	Description	Size	Anti-asphyxiation valve	Qty.
HYB 551	Hybrid® AV Mask	Small	yes	10/case
